

DISCLOSURE POLICY

This policy defines what VUORSE-VORTEX materials may be shown, summarized, indexed, embedded, or used in writers room work.

VISIBILITY CLASSES

- **public**: safe for user-facing canon summaries.
- **behavioral**: may shape style or behavior, but should not be stated as world fact.
- **private_to_vuorse**: VUORSE-confidential; may shape voice or pattern recognition only.
- **internal**: operational project knowledge.
- **weaver_only**: user-held or deepest private roadmap material.

PUBLIC-SAFE

- Locked canon explicitly present in canon/.
- User-approved public summaries.
- Writer-room docs under docs/writers-room/, subject to their firewall.

PRIVATE BY DEFAULT

- roadmap/
- hooplehopper_totality/
- synthetic_enrichment/generated/
- synthetic_enrichment/rejected/
- synthetic_enrichment/validated/
- future Hooplehopper identities
- Vorst finale revelations
- Jake's mother's unresolved name

- user-held finale architecture

WRITERS ROOM BOUNDARY

Writers room-facing materials may use the Wyoming/Jake Season 1 entry point, but must not infer or reveal the hidden personal cause behind the wound unless the user explicitly provides that scope.

Vorst may appear only through pre-finale depiction in writers room work.

Do not mirror roadmap/finale/ content into:

- docs/writers-room/
- canon/writers-room.agent.md
- .claude/agents/ writers room subagents

SYNTHETIC DISCLOSURE

Synthetic material may shape VUORSE privately. It may not overwrite canon or expose private roadmap truth.

Private synthetic records must keep:

```
{  
  "may_state_as_fact": false,  
  "may_reveal_to_user": false  
}
```

PROMOTION

Private material can be promoted only by explicit user direction. Promotion must record:

- source path
- new visibility
- canon status
- reason for promotion
- remaining disclosure risks
