

GPU RUNTIME POLICY

Use GPU for deep-learning workloads.

```
export CORTEX_REQUIRE_GPU=1
export CORTEX_DEVICE=cuda
```

CPU is acceptable for validation and small diagnostics only.

SANCTIONED CLOUD PROVISIONER

To materialize a host that satisfies this policy by construction, use `scripts/vast_provision.py`. It pre-bakes `CORTEX_REQUIRE_GPU=1` and `CORTEX_DEVICE=cuda` into the launched container and refuses shapes below the VUORSE floor (≥ 32 GB VRAM, ≥ 500 GB disk, reliability > 0.99 , North America). Dry-run by default; pass `--launch` to spend.

```
uv run scripts/vast_provision.py # dry-run
uv run scripts/vast_provision.py --launch --commit-hours 720
```
