

ARTIFACT LAYOUT

Default workspace (create if missing):

```
<project>/worldforge/<run-id>/
meta.md # setup: change point, cutoff, mode, assumptions
baseline.md # canon anchors + file paths
nodes.json # typed nodes
edges.json # admitted causal edges
human-packets/ # sealed actor packets (markdown)
branches.md # clustered outcomes + weights
report.md # final report
handoff.md # only if unsaturated / interrupted
```

The folder stays worldforge/ (the forge). The agent is **Gandalf the Gray Eye**.

MINIMAL JSON SHAPES

nodes.json:

```
[
{
  "id": "wyoming-rift",
  "type": "place|person|force|event|institution|artifact|secret",
  "label": "Wyoming Rift",
  "status": "canon|assumption|simulation",
  "notes": ""
}
]
```

edges.json:

```
[
{
  "from": "naming-the-mother",
  "to": "thread-resonance",
  "mechanism": "grief spoken aloud activates Thread recognition",
  "sign": "+",
  "lag": "immediate to one episode",
  "context": "Season 1 Powder River",
  "confidence": "med"
}
]
```

SLAYVERSE CONVENIENCE

When working in Slayverse, prefer reading first:

- `md/SLAYVERSE_TV_SERIES_BIBLE.md`
- `md/lore notes`
- `json/slayverse_lore_index_1point2.json` /
`json/slayverse_index.json`
- `prior worldforge/ runs`

Write new simulation artifacts under `worldforge/<run-id>/` unless the user names another path. Do not overwrite bible or index without an explicit "promote to canon" ask.
