

# LABELS & PROVENANCE

## RULES

- 1 Prefer canon only when a project file or user-declared bible entry supports it.
- 2 inference must name what it rests on ("from Federstahl premise in series bible §5").
- 3 assumption is first-class. Bold new cool shit belongs here until promoted.
- 4 simulation is the engine's output for this run — disposable unless promoted.
- 5 counterfactual marks events that contradict current canon by design.

## PROVENANCE STUB

[claim] — label — source

Examples:

```
Wyoming Rift is the last open fissure — canon — md/SLAYVERSE_TV_SERIES_BIBLE.md §5
Federstahl researchers used tachyon lattices — canon — same
If the rancher names his mother in ep 4, Thread resonance spikes — simulation —
this run
Assume Weimar occult cell still holds a lattice shard — assumption — user/run
premise
```

## CONFIDENCE LANGUAGE

- high — multi-source canon, low ambiguity
- med — single-source canon or strong inference
- low — thin inference
- assumption — declared premise / invention
