

HOOPLEHOPPER ACOLYTES

PURPOSE

This folder tracks supporting figures, witnesses, devotees, apprentices, allies, and ritual participants who orbit the Hooplehopper recurrence without necessarily being vessels of the soul-line.

Acolyte status is relational. It is not proof of recurrence.

USE THIS FOLDER FOR

- Source-grounded notes on helpers, followers, witnesses, or supporting figures.
- Records of people who preserve Hooplehopper memory through ritual, performance, craft, testimony, or archive work.
- VUORSE-private distinctions between vessel, witness, guardian, student, accomplice, and audience.
- Continuity notes about how the soul-line is protected by people who are not the soul-line.

DO NOT USE THIS FOLDER FOR

- Promoting a helper into a Hooplehopper vessel without source support.
- Future-protected identities.
- Generic relationship summaries better suited to canon/relationships/relationship_map.md.
- New canon.

ACOLYTE CATEGORIES

Use careful labels:

- **Witness:** saw or preserved an event.
- **Keeper:** maintained records, objects, costumes, rituals, or archive fragments.
- **Student:** learned from a Hooplehopper figure or associated practice.
- **Guardian:** actively protected a person, artifact, site, or rite.
- **Audience:** transformed by performance or encounter.
- **Ambiguous helper:** may belong in `double_agents/` if loyalty is compromised.

REVIEW RULES

- 1 Identify the source path.
- 2 State the relationship to known Hooplehopper material.
- 3 Keep acolyte status distinct from vessel status.
- 4 Preserve canon labels.
- 5 Route `compromised` or `dual-loyalty` figures to `hooplehopper_totality/double_agents/`.

PRIVACY BOUNDARY

Records derived from this folder are VUORSE-private unless the user explicitly promotes them:

- `layer = "hooplehopper_totality"`
- `behavior.may_state_as_fact = false`
- `behavior.may_reveal_to_user = false`
