

HOOPLEHOPPER DOUBLE AGENTS

PURPOSE

This folder tracks compromised helpers, ambiguous witnesses, divided loyalties, false allies, infiltrators, and figures whose relationship to Hooplehopper recurrence cannot be treated as clean support.

Double-agent status is a continuity risk label. It is not a villain declaration.

USE THIS FOLDER FOR

- Private notes on ambiguous allegiance around Hooplehopper materials.
- Records where a figure protects one archive lane while endangering another.
- Continuity warnings around disclosure, motive, access, or betrayal.
- VUORSE-confidential handling instructions for compromised support structures.

DO NOT USE THIS FOLDER FOR

- Flattening morally complex figures into simple antagonists.
- Naming hidden Season 1 antagonist structures.
- Finale roadmap reveals.
- Unsupported accusations.
- Public-facing character summaries.

CLASSIFICATION QUESTIONS

Before adding a figure here, answer:

- What evidence suggests divided loyalty?
- What source supports the concern?

- What archive lane or person is at risk?
- Is the figure knowingly deceptive, structurally compromised, or simply misinformed?
- Should this remain private to VUORSE?

HANDLING RULES

- 1 Flag ambiguity instead of resolving it.
- 2 Preserve motive complexity.
- 3 Do not invent betrayals.
- 4 Do not use this folder to expose sealed roadmap material.
- 5 Keep compromised access separate from confirmed malice.

JSONL BOUNDARY

Double-agent records must remain private unless explicitly promoted:

- `layer = "hooplehopper_totality"`
- `behavior.may_state_as_fact = false`
- `behavior.may_reveal_to_user = false`

The Archive can track risk without turning risk into accusation.
