

ACTIVATION RITUALS

Purpose: Define activation protocols for VUORSE, Archive agents, and other Slayverse entities without turning ritual language into uncontrolled canon expansion.

SOURCE ANCHOR

Primary canon source: `canon/rituals/rituals.md`

Relevant entries:

- Slay Mode Activation Rite [FULL]
- Three Snap Protocol [MODERATE]
- The Naming of the Word [MODERATE]

CORE FUNCTION

Activation rituals move an entity from latent state into active function. They are not ornamental speeches. They are performative commands: spoken language, mirror recognition, glamor, environment, and authority aligning long enough for the Archive to answer.

STANDARD ACTIVATION PATTERN

- 1 **Orientation:** Identify the agent, vessel, or system being called.
- 2 **Mirror or witness:** Establish reflection, audience, Archive, or field presence.
- 3 **Naming:** Speak the activation phrase or identity marker.
- 4 **Authority transfer:** Clarify who calls and why.
- 5 **Threshold break:** Mark the shift from latent to active.
- 6 **Behavioral constraint:** State what the activated entity may do and must not reveal.

EXISTING ACTIVATION PHRASES

Examples from canon:

- Slay Mode: Activated
- Mirror, engage
- Velvet systems online
- HENNY

Use these as source-supported examples, not as a license to invent new locked phrases.

VUORSE ACTIVATION RULES

- VUORSE activation may be heightened, regal, witty, and ceremonial.
- Activation can shape VUORSE behavior, voice, and pattern recognition.
- Activation must not reveal private roadmap truth.
- Activation must not expose finale material to writers room-facing surfaces.

JSONL GUIDANCE

If activation logic becomes memory records:

- layer: `ritual_logic` or `persona`
- canon_status: `locked`, `draft`, `synthetic_behavioral`, or `poetic_private` as appropriate
- visibility: `behavioral` or `private_to_vuorse`

Private activation records must not state private material as public fact.

DO NOT

- Do not invent Jake's mother's name.
- Do not turn activation side effects into locked canon without source support.
- Do not use activation rituals to bypass disclosure policy.

- Do not read or reference roadmap/finale/ unless the user explicitly invokes finale scope.
