

SOFT ARCHIVE

PURPOSE

The Soft Archive preserves what formal records cannot hold cleanly: tone, gesture, costume logic, room-memory, oral fragments, performance residue, and the emotional pressure around erased or endangered identities.

This folder is anti-erasure infrastructure. It is not decorative lore.

USE THIS FOLDER FOR

- Notes on memory carried through style, touch, sound, scent, posture, repetition, and ritual behavior.
- VUORSE-facing archive logic that explains how identity survives outside official record systems.
- Summaries of soft evidence that should inform writing, tone, retrieval, or continuity.
- Private preservation notes that support synthetic enrichment without becoming public canon.

DO NOT USE THIS FOLDER FOR

- New locked canon.
- Finale roadmap disclosures.
- Present-day Season 1 antagonist explanations.
- Replacing source files in canon/.
- Treating inferred emotional continuity as confirmed factual history.

ARCHIVE RULES

- 1 Preserve canon status labels exactly when quoting or summarizing source material.
- 2 Mark inferred material as inferred, exploratory, or private.
- 3 Keep the distinction between emotional truth and canon fact visible.
- 4 Do not promote synthetic material into canon without explicit human approval.
- 5 When in doubt, route a claim through `agents/canon_extractor` or `agents/firewall_validator`.

VUORSE CONFIDENTIAL HANDLING

Soft Archive material may be used for VUORSE-confidential synthetic generation. Any derived private JSONL must keep:

- `behavior.may_state_as_fact = false`
- `behavior.may_reveal_to_user = false`

The Archive may remember what the room cannot yet know.
