

REPORT

I just realized there are images of sassy that are not present in this repo yet Uh quite extensive images of s She's the first hoople hopper ever really to appear in public media # Gray Eye forge — key-art-census

Counsel of Gandalf the Gray Eye

SETUP

- **Change point:** Full reconnoiter + anti-drift structure for Slayverse character key art / genmedia path
- **Cutoff:** 2026-08-05 Wave 0 observation
- **Interval:** Present → structured design locks
- **Mode:** prospective
- **Domains:** Roster, design caches, pitch forks, Velvet mood, drift gate
- **Assumptions:** All art = design not canon; near-lock = Professor + Dr Slayton; favorites = velvet balance / thweavergold / swan lake; Elena ≈ Mariah pending confirm

BASELINE (CANON ANCHORS)

- 26 characters in matching indexes (VUORSE-VORTEX Slayverse/json + slay-cortex lore)
- +4 Summit AI in [characters.md](#) only
- Design roots inventoried in [recon.md](#) / [media-roots.json](#)

CAUSAL MAP

NODES

- 26 lore persons + 4 Summit meta (nodes.json)

- Design libraries, pitch forks, large caches, favorites, near-locks, orphan set, gap set

EDGES

- Drift → identity collapse | + | cumulative | high
- You Shall Not Pass → genmedia pipeline | + | immediate | assumption
- Recon → image-map | + | same session | high
- Professor pool → Heda dual look | + | n/a | assumption

PROPAGATION (PRIMARY CHAIN)

- 1 Territory is VUORSE-VORTEX, not a single folder rumor.
- 2 Design volume is high; canon faces are zero until promotion.
- 3 Map claims what it can; orphans and gaps become visible debt.
- 4 Gate forbids prompt-only regen; locks must be designated.
- 5 Near-locks (Professor/Heda, Dr Slayton) are first to stabilize when steward picks lock files.
- 6 Favorites steer mood dialect without crowning Western cast.

BRANCHES

Branch	Weight	One-line outcome
B1 Steward designates Professor + Slayton locks next	likely	genmedia consistency can begin under the gate
B2 Large caches hide more linked faces	plausible	gap list shrinks after your_project/data sample pass
B3 Elena ≠ Mariah	stretch	Dr Slayton near-lock pool resets
B4 Promote Heda name to index	plausible	lore catches design practice

CONTINUITY FLAGS

- `slayverse_lore_index_1point2.json` did not parse as standard entities JSON
- 8 hash/unnamed orphans in primary images still unclaimed
- 15 character design gaps in primary libraries
- `Slayverse/assets` + `slay-cortex` mega-caches not plate-mapped
- Heda Von Schwann absent from lore index (design-known)

PROMOTION CANDIDATES (ASK FIRST)

- 1 Add alias **Heda Von Schwann** under Professor in index / [characters.md](#)
- 2 Confirm Elena Slayton plates → Mariah
- 3 After locks chosen: promote specific files from design → canon visual (only on explicit ask)
- 4 Seat **Sassy McGraw** in `slayverse_index.json` when steward asks — first public face; docs already exist; imagery steward-curated only (LoRA test dumps fenced)

LABELS AUDIT

Load-bearing claims labeled in `meta/recon/report`. Unlabeled decorative asides omitted.

DELIVERABLES WRITTEN

- `meta.md`, `baseline.md`, `recon.md`, `YOU_SHALL_NOT_PASS.md`, `style-lock.md`
- `media-roots.json`, `lore-roots.json`, `character-index-compare.json`
- `primary-image-inventory.json`, `image-map.json`, `nodes.json`, `edges.json`
- `briefs/professor-von-hooplehopper.md`, `briefs/dr-mariah-slayton.md`
- `report.md`

Wave 0: complete. Gate: planted. Locks: awaiting your finger on the two near-lock files.
